INTRODUCTION

The Alexander Henderson's Colchester Scheme of Goods Project commenced in 2011, in conjunction with the George Washington Invoices and Orders Project (Archaeology Department 2012) and the Archaeological Collections Online initiative (www.mountvernonmidden.org). The Archaeological Collections Online initiative undertaken by George Washington's Mount Vernon Estate, Museum & Gardens seeks to digitize and contextualize the thousands of artifacts excavated from the South Grove Midden archaeological site containing household and kitchen trash from Mount Vernon's families and slaves.

By cataloguing each item requested by the merchant Alexander Henderson as inventory for the shelves of his store in Colchester (a few miles south of Mount Vernon), the goal is to answer the following research question: how similar or different was the material world afforded through the consignment system (accessed via the Invoices and Orders Project) than that available through the direct trade system (evidenced in the Scheme of Goods Project) in this upper Potomac region? Additionally, cataloguing this database is an important step in positioning the artifacts from the South Grove Midden archaeological site into a broader context. We intend the scheme of goods catalogue to provide a dataset for many other future research questions.

The complete database encompasses 15 Schemes of Goods, including supplements and additions (Table 1) recorded in the years 1758 through 1764 and requested for the years 1759 through 1765 and transcribed in Charles Hamrick and Virginia Hamrick's (1999) *Virginia Merchants*. During these years, Henderson recorded in his letterbook lists of goods that he intended to stock in his store and sent these lists back to Scotland where his boss, John Glassford of Glassford and Company (the most prosperous trading firm in the Potomac region), procured the goods and sent them back to Colchester. Mount Vernon's Archaeology Department entered the schemes into Excel and catalogued these entries, forming a dataset of 2,328 individual orders. Whereas large-scale planters like George Washington sold their tobacco to individual factors who gave them the credit to purchase goods directly from England, yeoman planters could sell their tobacco to local merchants like Henderson and receive store credit that they could then use to buy items of necessity and novelty. Local stores also occasionally catered to enslaved individuals who often bought goods through barter and the colonial gentry who may have needed certain goods before their shipments from England arrived.

Scheme (Title from Hamrick and Hamrick (1999) when given)	Date Recorded	Year
Scheme of Goods for Occoquan Store [for] 1759	August 7, 1758	1759
Scheme of Goods for Occoquan Store 1760	July 27, 1759	1760
Scheme of goods for Occoquan Store for Fall 1760	December 17, 1759	1760, fall
A Scheme of Goods for Mr. JOHN GLASSFORD's Store at Colchester Virginia for 1761	July 12, 1760	1761
Articles to be added to the Scheme "Diamond G" for Occoquan Store in 1761	August 21, 1760	1761, addition
Scheme of Goods [mark] "G" for Colchester Store 1762	July 17, 1761	1762
List of Fall Articles [mark] "G" wanted for Colch'r Store in Fall 1762	December 2, 1761	1762, addition
List of Goods to be shipped from Bristol in the Snow Jeanie for Glochester Store for 1763	January 18, 1762	1763, a
[contained within a letter]	February 8, 1762	1763, addition 1
A Scheme of Goods for Colchester Store [for] 1763 [Mark] "G"	July 6, 1762	1763, b
[addition to Scheme for 1763]	October 12, 1762	1763, addition 2
A Scheme of Goods for Colchester Store 1764 [mark] "G"	September 2, 1763	1764
Scheme "G" for Goods for 1765	September 17, 1764	1765
Supplement to Scheme "G" for Goods for 1765	[September 17, 1764]	1765, supplement
[addition to Scheme for 1765]	December 17, 1764	1765, addition

Table 1. List of the Schemes of Goods entered into the catalogue, the date they were recorded in the letterbook, and the year Henderson intended to have the inventory stocked in his Colchester store.

USING THE DATASET

Before using these data to answer research questions, please take a moment to read the cataloguing manual for important information on the decisions made about what to record and how. While our aim was to be as objective and transparent as possible, mistakes happen, or differences of opinion may arise from interpretive decisions. If you have a question about any entry, consult the original document (Hamrick and Hamrick 1999).

Every effort was made to standardize the format of this spreadsheet with the Invoices and Orders Project (Archaeology Department 2012), including fields like qualifiers, items, categories, and subcategories, to allow for comparison where possible. There is also a category of data captured in the scheme of goods catalogue that is unique to that dataset – these are the comments interspersed into the inventories that sometimes pertain to specific items and other times are just general comments. For example, in the 1759 scheme, Henderson writes, “The Earthen Ware from Glasgow is intolerably bad and 50% dearer than from Liverpool,” hinting to Glassford that he should provide the store with ceramics from Liverpool and not Glasgow in the future. This comment, and others like it, was added to the inventory descriptions for the earthenwares to which it pertains. Additionally, it was separated out as a comment with the thought that it provides important information on material culture and the direct trade system that might warrant study in its own right.

The following fields were recorded in the catalogue (Table 2) and are described in more detail below.

Field	Description
Year	Year item would have appeared in the store.
Folio Page	The folio page is the reference to where the item can be found in the original document.
Reference	The reference is to the corresponding page in Hamrick and Hamrick (1999).
Item number	Sequential number in the order the item appears in the inventory.
Quantity	The count of the item ordered.
Qualifier	Used if the quantity recorded is not per piece (i.e., pair, yard, pound).
Item	A one or two word name for the good received.
Category	The broad grouping into which the item falls (i.e., weapons, furniture, textiles) to facilitate macro-analyses.
Subcategory	The sub-grouping into which the item falls (for textiles, i.e., bedding, fabric, alcohol).
Inventory Description	A record of the description of the item exactly as it appears in the Scheme of Goods.
Unit Price	Not always recorded, but the cost of a unit of the item, as opposed to the total cost.
Pound	The total cost of the item.
Shilling	The total cost of the item.
Pence	The total cost of the item.
List	Used to denote if multiple items are recorded as a list with only one total cost.
Note	Records individual items that were part of a list of items with one cost or for any other comments.

Table 2. Data entry fields for the Scheme of Goods database.

DATA ENTRY FIELDS

The following are the instructions used by cataloguers when entering the Schemes of Goods into the database.

Year

The year is the date which Alexander Henderson intended to have the inventory stocked in the Colchester store. It is not the year that the goods where ordered. For that information, see table 1.

Folio Page

The folio page is the reference to where the item can be found in the original document. Hamrick and Hamrick (1999) include this information in the upper right hand corner of each transcribed page.

Reference

The reference is to the corresponding page in Hamrick and Hamrick (1999).

Item Number

Before entering any scheme, the items listed in this document must be sequentially numbered starting with 1. Enter the number assigned to each item. The purpose of this field is to ensure that any scheme can be put into its original sequence and, therefore, retain contextual information that would otherwise be lost when items are re-sorted in the spreadsheet.

If the item is a comment, then enter "comment" in the **Item Number** field.

Quantity

Record the **Quantity** ordered as listed on the inventory. This may be a whole number or a decimal to 2 places. Leave blank if not given.

Qualifier

Enter the qualifier used in the inventory. Choose from one of the categories listed in ***APPENDIX A***.

Note that abbreviations in the original are recorded as the complete word in this field (i.e., lb. = pound; doz. = dozen). Things which come in pairs such as shoes, gloves, etc. should be listed as such (2 pair of shoes = 2; a pair of scissors = 1). If there is no qualifier used, leave blank.

If the entry is a comment and not an item, enter "comment" in this field.

Item

Enter a one or two word name for the item received. Do not capitalize the first letter. Choose from the list in ***APPENDIX B***. Consult the *Oxford English Dictionary* (OED) for definitions.

If the entry is a comment and not an item, enter "comment" in this field.

Category and Subcategory

Choose from one of the categories listed in ***APPENDIX C***.

These fields attempt to interpret the items in terms of their use or function on the plantation or in the household. Although striving for some degree of uniformity, categorizing items may at times be more of an art than a science. Often the same types of items fall under a number of categories or subcategories. Use the inventory and descriptions for clues to the intended use; consult the *OED*.

If the entry is a comment and not an item, enter "comment" in this field.

Inventory Description

Record the description of the item exactly as it appears in the scheme of goods, using the same spelling, punctuation, and capitalization.

Where “ditto” or “do” is used, say what that refers to but place your words in brackets after the word “ditto” or “do” .

If you spell out abbreviations or complete what appear to be obviously incomplete words in order to clarify the meaning, place these additions in brackets.

Unit Price

If the price per unit was originally recorded, it usually follows the inventory description and sometimes an “@” sign. Leave blank if the unit price was not recorded. If a unit price is not given, but a cost is, no attempt was made to calculate unit price.

Pound.Shilling.Pence (Cost) and List

Record the total cost of the item(s). If a cost is not given, but a unit price is, no attempt was made to calculate total cost.

The format is set as: pounds.shillings.pence. Use zeros to fill in empty spaces (eg. 0.4.0). FYI, 12 pence = 1 shilling, 20 shillings = 1 pound.

If the item is part of a list of items with only one cost given, record the total cost and mark the **List** field with an asterisk (*).

Note

Records the items represented in the **List** field. Record any additional information in this field.
